Profile

Efficient **Senior Unity Developer** with a solid background in creating multiplayer VR experiences. I have spent the past 6+ years working on immersive, interactive games that have been played by 500k+ players around the globe. I enjoy developing clean, well written code, problem solving, and making innovative ideas into a reality as part of a team. I am passionate about **VR** and using **Unity** to create fun and enjoyable experiences.

Professional Experience

04/2021 – 08/2025

Lead Game Developer

Iasi, Romania

Inowize ☑

- Laid the foundation of the QBIX platform - hardware, tools, templates, game systems.
- Made game building at Inowize faster, more stable, and more scalable.
- Managed the full game development pipeline for the multiplayer platform QBIX, publishing seven fully-featured games which have been deployed in entertainment centers worldwide and played by thousands.
- Built core systems in Unity and C# for gameplay, AI, audio, physics, and UI to ensure smooth operation across subsystems and allow for reuse in future projects.
- Responsible for improving the maintainability, stability, and performance of multiple legacy games in the Arkadia VR Arena codebase by performing extensive code cleanup and optimization.
- Standardized the company's codebase by instituting style guides, naming conventions, and best practices which were enforced during code reviews.
- Improved engineering standards and team self-sufficiency by implementing modern development practices and workflows, along with mentoring more junior team members.

03/2019 – 04/2021

Gameplay Programmer

Iasi, Romania

Inowize ☑

- Assisted in the development of Arkadia VR Arena, a multiplayer VR attraction for location-based entertainment.
- Supported the design and implementation of core gameplay systems in Unity / C#, including player movement, combat mechanics, power-ups, and enemy actions.
- Designed VR interaction systems (grabbing, shooting, UI selection) to provide varied room-scale experiences.
- Worked to add and polish multiplayer features, syncing player actions and game states in real-time.
- Contributed to gameplay balancing and overall gameplay feel, ensuring fun and consistent experiences across all player skill levels.
- Collaborated closely with the design and art team to integrate game-play animations, audio, and visual effects.
- Helped with performance profiling and optimizations to achieve smooth frame rates.

Education

2015 – 2018

BSc. (Hons) Computer Games Programming

London

London Metropolitan University ☑

- Finished with a 1st Class Honours
- Game engines (Unity and UnrealEngine)
- AI & Physics for games

- Multiplayer networking
- Math & graphics programming

Projects

Chef Express

Designed and developed a fast-paced cooking game inspired by *Overcooked*. Players use intuitive gestures to perform cooking actions like chopping, boiling, grilling, and frying. Emphasized seamless gesture recognition to deliver a dynamic and immersive multiplayer kitchen experience.

Fright Maze

Created an immersive on-rail shooter featuring zombies and monsters, culminating in a challenging boss battle. Designed for the QBIX system, combining precise motion controls with intense gameplay to deliver a thrilling and suspenseful experience.

Skibigo

Created an interactive motion-controlled platform game for the QBIX platform. The user controls their body to navigate the game character, relying on motions like jumping, dodging obstacles, scoring points, and screen-switching. Focused on integrating intuitive motion to provide an active and immersed gameplay experience.

Bubble Smasher

Developed a high-energy action game inspired by *Bubble Trouble*, enhanced with full-body movement via the QBIX system. Players dodge and position themselves to pop bouncing bubbles in increasingly challenging levels, blending classic arcade mechanics with modern motion control gameplay.

Mummy Twist

Designed a time-based level puzzle game where players collect ancient symbols and drag them to matching locations using full-body gestures. Integrated stealth mechanics requiring players to hide in safe zones to avoid a mummy, which temporarily freezes player actions if spotted. Built for the QBIX system to combine physical engagement with strategic thinking.
